BIM

Building Information Model – the Future of Architecture

BIM brings integration of graphics and data to the design/build/management process

“BIM is a more significant change to the architect’s future than the change from hand drawing to CAD. Most architects do not yet understand this, you should.”

Dennis Neeley, architect, is the instructor for this class, his company created the AutoCAD AEC products, he was a principal at ASG, Softdesk, Viscomm, Bricsnet and Tectonic. These software companies have lead in the development of CAD, electronic product data, internet based facilities management and architectural data manipulation.

BIM – the Future of Architecture
Course 498M - Winter Quarter
Digital Commons (Gould Hall 007F)
Tu & Th 9:30 – 10:20
Lectures & hands on use of Revit
